

“ Having suffered from type 2 diabetes for 41 years I have all the complications including neuropathy. I bought the CB Home to help alleviate the discomfort caused by the neuropathy in my legs. I was very sceptical. However, after only a few sessions I began to have less stabbing pains and was able to walk with more vigour. ”

Colin Taylor, Derby

“ I bought the Circulation Booster because for the past 5 years I have suffered from swollen ankles and they have got considerably worse over the past few months. However I had only been using the booster for just over a week every night for 30 minutes and for the first time in 5 years I have NO swollen ankles and I have noticed a marked improvement in the soreness and tenderness I used to have. ”

Lynn Birt, Northants.

aching legs and
swollen feet

Introducing the Circulation Booster™ range

A proven way to increase blood circulation, reduce swelling and ease aches and pains.

High Tech Health, a medical devices specialist, would like to introduce you to a range of new and innovative therapeutic devices that could make a real difference to your quality of life.

You may find the Circulation Booster™ products particularly effective if you suffer the discomfort of:

- ✓ **poor circulation**
- ✓ **swollen feet & ankles**
- ✓ **painful legs & feet**
- ✓ **sore muscles or aching joints**

Already the Circulation Booster™ products have helped thousands of people to treat their symptoms and improve their general wellbeing. Just one 30 minute therapy a day will give you a significant and long lasting improvement in circulation.

Your body needs the right amount of blood flow to keep your heart pumping, your legs moving and your brain functioning. Blood circulation is critical to your existence, and preventing poor leg circulation must be a top priority.

How the Circulation Booster™ works

Circulation Booster™ products use tried and tested electrical muscle stimulation, the same technology used by physiotherapists and sold by pharmacists for decades. The innovation with The Circulation Booster™ however is its ingenious method of application and unique applicators.

The physiological result? Nerves are stimulated while muscles contract and release. Typically applied to the feet where there are thousands of nerve endings, this is highly effective at stimulating the body's own vein pump to get the blood back up through the legs towards the heart, without putting added burden on the heart.

What results can you expect?

Clinical studies support this method of application. It has been shown that the use of muscle stimulation of the feet, as well as the calf, can:

- ✓ **reduce foot and ankle swelling**
- ✓ **increases blood flow throughout the lower limbs thereby reducing the risk of deep vein thrombosis (DVT)**
- ✓ **increase pain-free walking associated with arthritis, neuropathy or circulation disorders**

By using The Circulation Booster™ regularly, you will experience the benefits of improved circulation and general wellbeing.

* Details of clinical evidence is available at www.circulationbooster.co.uk

Medical opinion

"We have tested and used the Circulation Booster and have found that it is very effective at stimulating the muscles of the calf and lower leg, causing a very good increase in blood flow. I am so impressed that I will be using it myself".

Mr Mark Whiteley, Consultant Vascular Surgeon and Director of The Whiteley Clinic

"It's well known that electrical stimulation has a positive effect on circulation in the legs, but obviously such devices have not previously been available to the public.

If we can prevent DVTs and pulmonary embolisms by using such devices, it is a good idea. There are still too many people dying from travel-related DVT".

Dr Anders Cohen, Consultant, Kings College Hospital London

"This [Circulation Booster] helps the muscles to contract. When the muscles contract they push the blood up the veins. The veins have valves to stop the blood going back and that keeps the blood flowing to reduce the risk of DVT and also the risk of a serious condition called Pulmonary Embolism where the clot moves from the legs into the lungs. This is an excellent idea..."

Dr Chris Steele on ITV's This Morning

What models are available?

Currently there are two models available in the Circulation Booster™ range:

Circulation Booster HOME

The Circulation Booster HOME is a powerful therapy unit. It is designed for people who want therapies whilst seated at home.

Circulation Booster MOBILE

A lightweight and portable solution: The Circulation Booster MOBILE offers a flexible therapy option. Ideal for use when out and about, travelling or confined to bed.

The Circulation Booster HOME

The Circulation Booster HOME is our home therapy device to improve circulation.

With all the “bells & whistles” you could hope for, this feature packed device offers a convenient method of application while at the same time being easy-to-use.

Simply plug into the mains, sit in a comfy chair, read a book or watch your favourite TV programme while you treat yourself to better circulation.

Target Specific areas

Knees playing up? Bad back or aching shoulder? The Circulation Booster HOME also includes six electrode pads. You can use these to target points of pain such as your sore knees or aching back, or apply the pads to acupuncture points. You can also use this facility to strengthen specific muscle groups.

- What you get with your Circulation Booster HOME

The Circulation Booster MOBILE

The Circulation Booster MOBILE is our mobile therapy device to improve circulation. It is the first fully portable device that actively increases circulation.

Circulation Booster MOBILE comes with a handheld, battery operated control unit which connects to very special conductive, silver fibre garments such as a sock or glove applicator. The electrical impulses are applied through the silver fibres which stimulate the underlying nerve endings to contract and relax the muscles.

Now you can improve your circulation almost anywhere. Use it at work, travelling, while shopping or just wear it around the house. The sleek design means that it can be used discreetly or as boldly as you like. Improve your circulation even whilst sitting in a cramped aeroplane seat.

- Unique silver-woven socks to stimulate nerve endings and muscles
- Muscles contract and relax in lower legs
- 10 programs with variable intensity
- Easy-to-use handheld controller
- Long leads for even the tallest people
- Made with anti-odour and antimicrobial fibre
- Glove applicators available as an accessory
